

TRẦN MẠNH KHANG

Applied AI / LLM Engineer Fresher

khangjaki12@gmail.com | My Tho, Tien Giang, Vietnam | github.com/KhangTranManh

SUMMARY

Final-year Software Engineering student at Ton Duc Thang University (graduating 2026) focused on Applied AI and LLM systems. Hands-on experience from an AI Engineer internship at Concentrix with domain-specific model fine-tuning, preference optimization, model evaluation, prompt engineering, and agent workflow testing. Comfortable translating real production failure cases into targeted training and evaluation data, with additional experience in full-stack development and computer vision.

EXPERIENCE

AI Engineer Intern | Concentrix, Vietnam

Mar 2026 – Jul 2026

- Built and evaluated QA/QC classification workflows for telesales call assessment, using speech-to-text conversation data transformed into structured JSON and evaluated against QA/QC-labeled samples.
- Fine-tuned Jackrong/Qwopus3.5-9B-v3, a Qwen3.5-9B-based reasoning model, with Unsloth for domain-specific QA/QC behavior; monitored training/validation loss and validated performance on real production samples.
- Used targeted SFT and ORPO-style chosen/rejected preference data to improve difficult conversational cases where checklist-style evaluation failed to account for information already provided earlier in the call.
- Compared the specialized model against a general-purpose GPT baseline on the internal evaluation task, improving domain reliability while reducing prompt/context dependence and inference cost.
- Contributed to prompt engineering, manual model/bot testing, edge-case documentation, and LangChain/LangGraph agent workflow evaluation, including retry/fallback behavior and tool-response validation.

EDUCATION

B.Eng. Software Engineering | Ton Duc Thang University

2021 – 2026

GPA: 3.1/4 | Exchange Program, JeonJu University, Korea (2024): AI, Machine Learning, Deep Learning | IELTS 6.0

SELECTED PROJECTS

Autonomous Vehicle AI | JeonJu University, Korea — YOLOv8, PyTorch, OpenCV

- Prepared camera/sensor data and labeled road/lane regions for real-world driving scenarios; trained a YOLOv8-based lane/road-boundary detection pipeline to support path-following behavior.
- Identified dataset/annotation quality as a major failure source and improved labeling consistency to reduce false detections from visually similar road objects and conditions.

AI Agent Workflow | Personal Project — LangGraph / LLM Tools

- Designed a brain-worker agent pattern where a planner model interprets the user request and delegates tasks to a worker, with guarded tool access, retry/fallback logic, and bounded retries for failed tool calls.
- Explored structured validation and guardrail patterns to reduce invalid tool parameters, sensitive-data exposure, and unsafe access to restricted resources.

Fashion E-Commerce Website | Personal Project — React, TypeScript, Node.js, Express, MongoDB, Docker

- Built an API Gateway with separate User, Product, and Order services, JWT-based authentication, REST APIs, Dockerized services, and a tag-based recommendation system; manually tested endpoints with Postman.

SKILLS

AI / LLM: PyTorch, TensorFlow, Unsloth, SFT, ORPO / preference data, Prompt Engineering, Model Evaluation, RAG concepts

Agent Systems: LangChain, LangGraph, tool calling, retry/fallback workflows, guardrail concepts

Computer Vision: YOLOv8, OpenCV

Programming: Python, Java, JavaScript, TypeScript

Backend / Tools: Node.js, Express, REST APIs, MongoDB, Docker, Postman, Git
